Viacheslav Chudaev

Unity Gameplay Engineer

Portland, OR · contact@vchudaev.dev · linkedin.com/in/vchudaev · github.com/martycow
Authorized to work in the U.S. without visa sponsorship.

SUMMARY

Unity gameplay engineer with **10+ years of software development** and 7+ years in Unity. Built features for live mobile games with **50M+ and 1M+ downloads** and for a PC MMORPG in Steam Early Access. **Tripled monthly revenue** on a live title by reworking its offers system and led a team of four programmers. Strongest in gameplay systems, UI and designer tools.

TECHNICAL SKILLS

Core: C#, Unity, Zenject (DI), UniTask, Addressables, ECS
Gameplay: Core and meta gameplay, combat, abilities, behavior-tree AI, NPCs, character customization
Multiplayer: Photon, network synchronization, client-server architecture
UI: UGUI, NGUI, adaptive and responsive layouts, pixel-perfect implementation
Tools: Unity editor extensions (custom inspectors, scene gizmos), node-graph editors, designer tools
Live operations: Unity IAP, IronSource, AdMob, AppsFlyer, Firebase, remote config, CI/CD, iOS/Android releases
Performance: Unity Profiler, Xcode Memory Profiler, memory, frame-rate and UI optimization
Data: SQL, database design, stored procedures, player-data migration
AI tooling: Claude Code, Codex, agent orchestration for development workflows

EXPERIENCE

Visionary Realms — September 2025 – September 2026

Unity Gameplay Engineer | Remote

Pantheon: Rise of the Fallen | 3D high-fantasy MMORPG, PC (Steam Early Access)

- Owned **end-to-end development of the mail and market systems**: database schemas, stored procedures, network serialization and UI.
- Designed SQL schemas and executed a large-scale player-data migration across a shared MMO codebase.
- Refactored and tuned open-world climbing (ladders, slopes, edge detection, hanging); fixed network physics and pathfinding issues.
- Built new abilities, including graph-node logic and supporting runtime functionality.
- Refactored the abilities loadout panel, adding customization and improving usability.

Relocation to the U.S. — June 2024 – September 2025

Cubic Games — June 2023 – June 2024

Unity Gameplay Engineer | Remote

Block City Wars 2 | 3D open-world multiplayer mobile shooter, 50M+ downloads (Google Play)

- Developed **behavior-tree NPC AI with ECS** for peaceful and hostile open-world characters.
- Built weapon and vehicle customization and upgrades, a character editor, and adaptive NGUI UI.
- Owned multiplayer support and **network synchronization (Photon)** for all delivered features.
- Created designer tools (custom inspectors, scene gizmos) for configuring NPCs, districts, spawners and waypoints.

Ciprosoft
October 2022 – June 2023

Lead Unity Engineer | Remote

Dragon Game | 2D RPG battler prototype

- **Lead and primary developer** of a new prototype, occasionally joined by a second engineer; owned planning, estimates and delivery.
- Owned prototype architecture and technical implementation, adapting to frequent design pivots.
- Implemented combat, abilities, character customization, inventory, UI, VFX and SFX systems.

Beauty Tycoon | Mobile hair-salon tycoon game (App Store)

- **Led a team of four programmers** on the live project, owning planning and coordination.

ChillBase (formerly ChillGaming)
June 2020 – October 2022

Unity Gameplay Engineer | On-site

Combat Quest | 3D mobile action RPG, 1M+ downloads, 4.5+ rating (Google Play)

- **Tripled monthly revenue** by reworking the in-game offers system.
- Built PvP gameplay, refined the ability system, and created VFX and SFX systems.
- **Cut memory usage to 2 GB**, restoring support for older devices; optimized graphics and UI.
- Implemented advertising, battle pass and daily tasks; reworked cross-store payment processing.
- Delivered meta-gameplay systems, including cutscenes, a global map and tutorials.
- Owned CI/CD, remote config and DLC; shipped iOS and Android releases through soft and worldwide launch.

MZTA (Moscow Factory of Thermal Automatics)
May 2015 – June 2020

Firmware Engineer → Angular Developer → Unity Software Engineer | On-site

Unity Software Engineer (2018–2020) | SuperSCADA, industrial SCADA suite built on Unity (product page)

- Owned core architecture; the prototype won a Skolkovo innovation grant.
- Built an IDE-style dockable, adaptive UI with node-graph and code editors for industrial controller languages (IEC 61131-3).

Angular Developer (2017–2018) | Web platform for property managers and tenants

- Built meter-reading graphs, bill input, tenant chat and a forum.

Firmware Engineer (2015–2017) | Hired part-time while at university, full-time from 2016

- Wrote C# controller firmware (RS-232/RS-485, Modbus) and added editor features to a WPF IDE.

EDUCATION

RTU MIREA | Bachelor of Science in Information Technology 2012–2016
