Viacheslav (Slava) Chudaev

Software Engineer (C#, .NET)

Portland, OR · contact@vchudaev.dev · linkedin.com/in/vchudaev · github.com/martycow
Authorized to work in the U.S. without visa sponsorship.

SUMMARY

Software engineer with **10+ years of C#** across game backends and clients, desktop and industrial software, and web. Recently built **Cedar Clerk**, a multi-tenant ASP.NET Core and Angular publishing platform with **1,700+ automated tests**, developed with AI coding agents. Owned SQL schemas, stored procedures and a large player-data migration for a PC MMORPG, shipped features to live mobile games with **50M+ downloads**, and led a team of four programmers.

TECHNICAL SKILLS

Languages: C#, SQL, TypeScript; Rust in personal projects

Backend: ASP.NET Core, Entity Framework Core, ASP.NET Identity, OAuth, SignalR, Quartz, REST APIs, Stripe webhooks

Data: Database design, stored procedures, EF Core migrations, SQLite, large-scale data migration

Frontend and desktop: Angular, WPF, Electron, Unity UI

Testing and delivery: xUnit, Playwright, Linux (systemd), DigitalOcean, scripted health-checked releases, CI/CD, iOS and Android releases

Architecture: Client-server, multi-tenancy, network serialization, dependency injection, SOLID

AI tooling: Claude Code, Codex, Anthropic API integration, agent orchestration

EXPERIENCE

Cedar Clerk
July 2026 – Present

Full-Stack Engineer (independent project) | Portland, OR

Cedar Clerk | Publishing platform for indie creators (GitHub)

- Built an **ASP.NET Core (.NET 10) backend** with EF Core, ASP.NET Identity, Google, Discord and Telegram sign-in, SignalR real-time updates, Quartz background jobs and Stripe billing webhooks.
- Implemented multi-tenant personal blogs on subdomains and one-click publishing to Telegram, X, Bluesky and LinkedIn with per-platform formatting.
- Integrated the Anthropic API for incremental translation into nine languages with a shared glossary.
- Built the Angular web client and an Electron desktop app; covered the system with **1,700+ xUnit tests** and Playwright end-to-end suites.
- Deploy to a DigitalOcean Linux server with scripted, health-checked releases under systemd.
- Developed with AI coding agents (Claude Code, Codex) under my direction, with architecture decision records and a full test suite as guardrails.

Visionary Realms
September 2025 – September 2026

Unity Gameplay Engineer | Remote

Pantheon: Rise of the Fallen | Client-server PC MMORPG (Steam Early Access)

- Owned **end-to-end development of the mail and market systems**: database schemas, stored procedures, network serialization and UI.
- Designed SQL schemas and executed a **large-scale player-data migration** across a shared MMO codebase.
- Debugged server-side gameplay code and fixed network physics and pathfinding issues.
- Refactored the abilities loadout panel and the open-world climbing system.

Relocation to the U.S.

June 2024 – September 2025

Cubic Games

June 2023 – June 2024

Unity Gameplay Engineer | Remote

Block City Wars 2 | Multiplayer open-world mobile game, 50M+ downloads (Google Play)

- Developed behavior-tree NPC AI on an **entity-component-system (ECS)** architecture.
- Owned **network synchronization** (Photon) for all delivered features.
- Built internal tools for designers to configure NPCs, districts, spawners and waypoints.

Ciprosoft

October 2022 – June 2023

Lead Unity Engineer | Remote

Dragon Game | 2D RPG prototype

- **Lead and primary developer** of a new prototype; owned architecture, planning and estimates through frequent design pivots.

Beauty Tycoon | Live mobile game (App Store)

- **Led a team of four programmers**, owning planning and coordination.

ChillBase (formerly ChillGaming)

June 2020 – October 2022

Unity Gameplay Engineer | On-site

Combat Quest | Mobile action RPG, 1M+ downloads (Google Play)

- **Tripled monthly revenue** by reworking the in-game offers system.
- **Cut memory usage to 2 GB**, restoring support for older devices.
- Reworked cross-store payment processing; integrated ads and analytics (AppsFlyer, Firebase).
- Owned CI/CD, remote config and iOS and Android releases.

MZTA (Moscow Factory of Thermal Automatics)

May 2015 – June 2020

Firmware Engineer → Angular Developer → Unity Software Engineer | On-site

Unity Software Engineer (2018–2020) | Industrial SCADA suite for PC and mobile (product page)

- Proposed Unity for a new multiplatform SCADA suite and built the prototype that won a Skolkovo innovation grant.
- Built a dynamic IDE-style UI that Unity lacks out of the box: dockable, configurable panels, lists and hierarchies, plus graph and code editors for industrial controller languages (IEC 61131-3).

Angular Developer (2017–2018) | Web platform for property managers and tenants

- Built meter-reading graphs, bill input, tenant chat and a forum.

Firmware Engineer (2015–2017) | Hired part-time while at university, full-time from 2016

- Wrote C# firmware drivers (.NET Micro Framework) for heat and electricity meters over RS-232/RS-485 and Modbus; installed systems on customer sites.
- Implemented editor features in a WPF IDE for industrial controllers.

EDUCATION

RTU MIREA | Bachelor of Science in Information Technology — 2012–2016
